

## The Key to *Protecting* Your Business from Downtime

Cyberattacks, system failures, or natural disasters, can halt operations and damage customer trust, revenue, and reputation. That's why Malaysian businesses are increasingly turning to **Disaster Recovery as a Service (DRaaS)** to ensure resilience and uninterrupted continuity.

## What Is DRaaS?

**Disaster Recovery as a Service (DRaaS)** is a cloud-based solution that **replicates and maintains a copy of your critical IT infrastructure** in a secure, remote environment. In the event of an outage, you can **activate a fast failover** to this secondary site, **allowing business operations to continue** without significant disruption. Unlike traditional solutions that require costly backup data centers, DRaaS delivers flexibility, scalability, and cost-efficiency.

## Why DRaaS is Crucial for Malaysian Businesses

Alphamatic Systems' AlphaCare DRaaS, built on their proprietary BOSSCloud data center platform, delivers powerful features tailored to the needs of Malaysian organizations:

### Rapid Recovery

**1** With **Continuous Data Protection (CDP)**, businesses can achieve nearly zero Recovery Point Objective (RPO), in seconds, and fast restoration within **as little as 5 minutes** when disaster strikes.

Your production environment is kept as an image copy in an isolated, secure environment with **99.9% uptime assurance**. This ensures swift access to a ready-to-run environment when needed.

### 2 Robust Business Continuity

### All-in-One Backup, Replication & Recovery

**3** The service encompasses local backup options, cloud backup, and instant recovery from a single platform.

Regular integrity checks and automated recovery tests on files and servers ensure a high degree of confidence in recovery readiness.

### 4 Automated Validation & Testing

### Advanced Security Measures

**5** Features like end-to-end encryption, proactive malware and ransomware scanning, and isolated backup repositories safeguard data throughout all stages.

Whether you're an SME or a large enterprise, the platform scales to meet your needs and integrates seamlessly with your existing IT setup.

### 6 Scalable & Tailored to Your Business

### Around-the-Clock Monitoring

**7** DRaaS includes 24/7 monitoring and management, freeing your team to focus on business growth, not disaster readiness.

## DRaaS vs BaaS: Vital Distinction

While **Backup as a Service (BaaS)** ensures data can be restored when necessary, **DRaaS** goes a step further by enabling your entire IT environment to run from the cloud during emergencies. This means operations can continue without interruption, not just after restoration.

Alphamatic Systems **offers both BaaS and DRaaS** under the unified AlphaCare portfolio, giving businesses flexible, layered protection options.

Downtime can cripple business momentum but it doesn't have to. Especially when delivered via AlphaCare DRaaS with BOSSCloud, offers a fast, secure, and scalable safety net.

When disasters strike, your business keeps running—secure, seamless, and resilient.
