

Disaster Recovery as a Service (DRaaS)

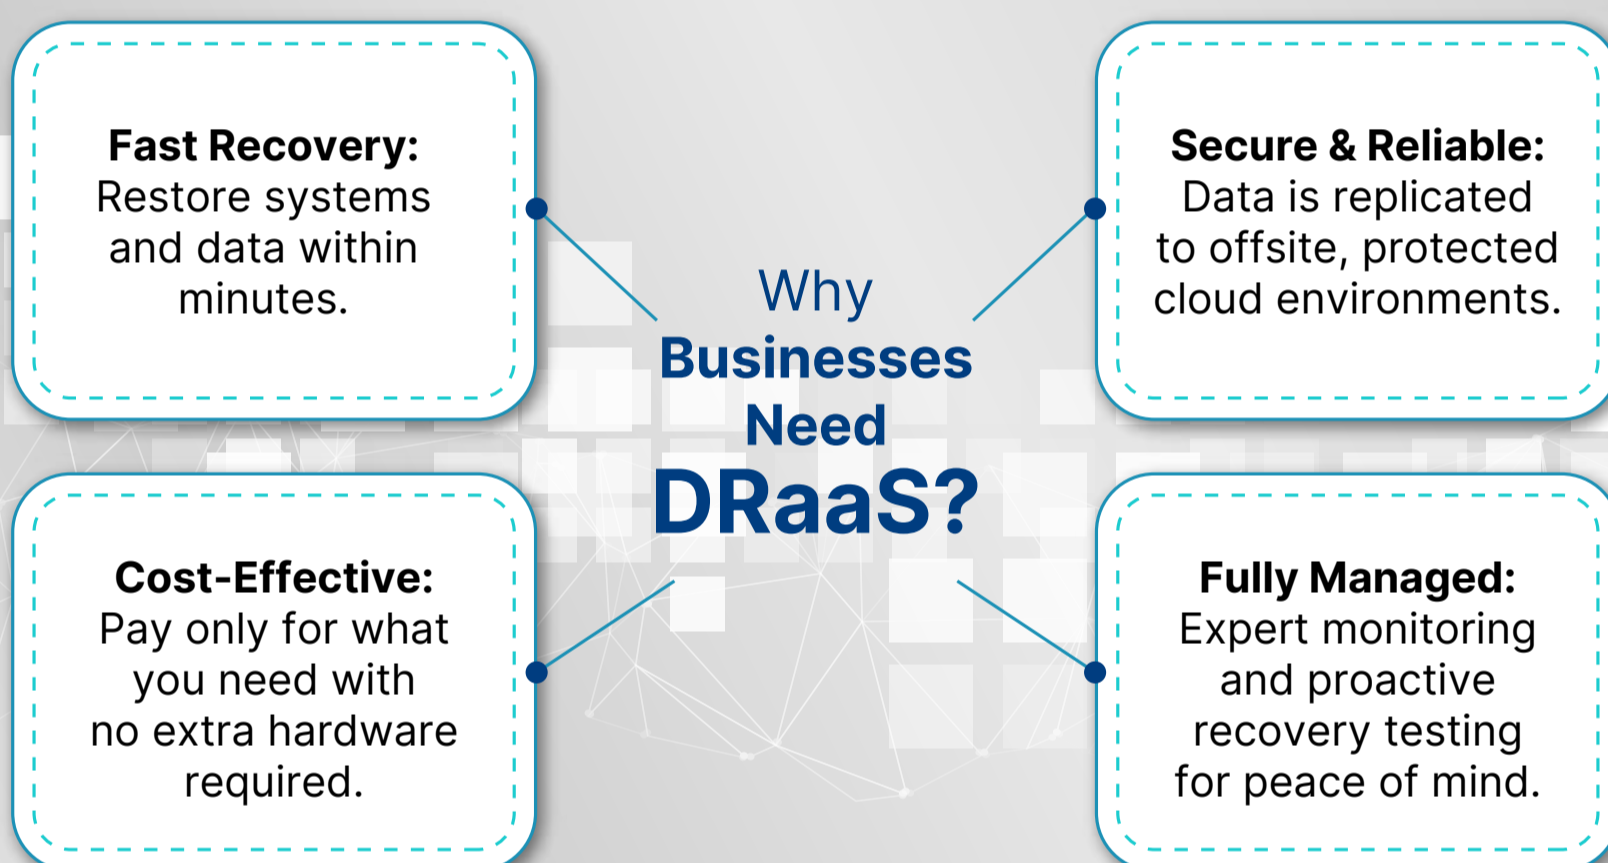

Unplanned outages, cyberattacks, or natural disasters can disrupt business operations in seconds. **Disaster Recovery as a Service (DRaaS)** provides a secure, cloud-based solution that helps your organization recover systems and data quickly minimizing downtime and loss.

What Is DRaaS?

DRaaS replicates your critical servers, applications, and data to the cloud. In the event of a disaster, your systems can be restored and made operational remotely, ensuring business continuity.

Compared to traditional recovery methods, DRaaS offers **scalability, cost efficiency, and faster recovery** without the need for physical infrastructure.

Choosing the Right DRaaS Provider

When evaluating a **Disaster Recovery as a Service provider**, look for:

- ✔ Proven expertise in **cloud and backup technologies** (e.g., Veeam Cloud Connect)
- ✔ Local data center presence for compliance and performance
- ✔ Transparent service-level agreements (SLAs)
- ✔ 24/7 monitoring and support
- ✔ Regular disaster recovery drills

Partnering with an experienced provider like **Alphamatic Systems Sdn Bhd** ensures that your business continuity plan is robust, compliant, and ready for any challenge.

Be Ready. Stay Resilient. Recover Fast with DRaaS.
